LED STRING LIGHT

Increased visibility provides a safer working environment, as lighting is always an issue during crawl space work. With our string of virtually indestructible LED lights for indoor or outdoor use, you have a solution! Save time during installation with no need to drag lights and drop cables all over the crawl space. Each light includes a carabiner to make installation simple. You can leave it as a permanent installation to light the way for others or use it to brighten other areas such as attics, patios, camping, construction sites, etc.

These five LED lights produce 7500 total lumens, use just 70 watts total and have an LED life of 25,000 hours. Lights are spaced 10' apart on a 50' cord. You can connect up to eight complete 50' sets, giving you a maximum of 60,000 lumens. The light color is 4000k (Cool White) which is midway between Warm White and Daylight. They are safe and cool to the touch and come with a 3-year limited warranty.

←————→
 Cords shown are representational only.
 Actual spacing between light heads is 10 feet.

Carabiner on each light head for easy attaching

LED Specifications

Lumens.....1500 per head / 7500 total
