

SEAL CRAWLSPACE VENTS WITHOUT A LOT OF TIME AND MESS.

VentBlock and VentBlock+ are polyethylene panels that provide a fast, clean and effective way to seal foundation vents when providing moisture control in a crawlspace. The “plus” version features a screen backing to restrict rodent entry for superior protection.

Specifications:

- Designed to fit the traditional 8" x 16" foundation vent openings.
- Actual Size: 8.25"x 16.25" x 1"
- Can easily be trimmed if a smaller size is needed.

Installation:

- From within the crawlspace, install by press-fitting to the back side of the existing foundation vent.
- Trim as needed for a proper fit.
- Optional: Seal around the edges for both a better seal and to prevent wind from blowing it out of place. (For this, we recommend Pur Stick Foam, Lexel Caulk or White Lightning 3006 Caulk.)

NOTE: In some cases, the screen may partially separate from the foam during installation due to torsion and compression forces. This will not degrade the performance of the product. Simply install VentBlock+ while making sure that the screen is placed tightly between the foam and the back of existing foundation vent.
